

SalusBank® is a virtual strongbox where every single user has the possibility to load his or her entire health records (including medical reports, x-rays, and clinical test results) and update each time it is necessary.

In case of emergency, whether **in Italy or in another country**, the user always has his/her health record available, and can offer the doctors providing treatment access to the confidential record, thus avoiding diagnostic errors, delayed diagnosis, failure to perform the appropriate exams, errors in the execution of an operation, procedure or exam, errors in the administration of treatment, errors in the dose or method of use for a pharmaceutical drug, inappropriate care (that not indicated), etc., thus better protecting the member's life.

It is possible also to receive the key health information via **sms** by sending a text message reporting your pin codes to the phone number indicated on your SB card;

By sending the emergency sms, **SalusBank will inform your family** about your condition so that they can be with you in these moments.

Moreover, the user is able to save money by avoiding further exams, which may have been required in the regular course of hospital care, by always keeping updated his/her online health record.
